

ProAdmin Version 3.21 introduces a new version of APL that must be deployed with the new ProAdmin calculation code. To accomplish this, complete the steps below.

1. While the service is stopped open the BIN folder and rename APLW.EXE to APLW.181 and PROADMIN.ADF to PROADMIN.181.
2. Copy the APLW.EXE and PROADMIN.ADF from the server321.zip file to the BIN folder.
3. Once you have deployed the ProAdmin_Server.w3 file restart the service.
4. Prior to running your Test method, you should run the SysInfo method (<http://localhost:8801/ProAdmin/SysInfo>). Confirm that you have APL Version 19.0.12

```
<!-- APL Version '19.0.12 Mar 13 2025 17:24:09 Win/32 (for Winklevoss Technologies, LLC)' -->
```
