

# What's New!

ProAdmin version 1.01

July 2002

ProAdmin version 1.01 introduces the following new features:

## General

- ◆ A direct entry into the Selection Expression Library is now available in the Input | Database menu. Previously this library could only be entered through the “back door” of the arrow button any place where selection expressions could be applied (such as Eligibility Definitions, Data Defaults, etc.).

## Server Maintenance

- ◆ When copying XML Linkage and Output Definition entries to the server file, the user can now compare entries in the server file with entries in the Standalone file to see the differences.
- ◆ The “Info” button has been corrected to take the descriptions of library entries from the Plan Repository rather than the current Standalone client.

## User-Defined Errors/Warnings

- ◆ User-defined errors and warnings messages that are defined as applying to Census Data (as opposed to Benefits) can now be referenced in Census Specifications and will be evaluated during benefit calculations.

## Data Defaults

- ◆ Data defaults are now permitted for fields where no database or XML linkage has been defined. This allows use of Data Defaults to create special fields for benefit determination from existing database fields.

## Detailed Output

- ◆ The legend for detailed output now indicates whether the calculation was a Final or Estimate calculation.
- ◆ The interest rate for each calculation date is now specified on the detailed output of (1) annuity

factor components and (2) payment form conversion calculations.

## Help

- ◆ Context-sensitive help has been added and enhanced in many areas including the
  - Data Dictionary, Database Linkage, XML Database Linkage, and XML Output Linkage commands in the Input Menu Database section;
  - Date Adjustments and Numeric Rounding in the Input Menu Rounding section;
  - The Salary Definition Salary History command;
  - Service Definitions and Service Definitions Sets;
  - The input menu Output Definitions Command; and
  - The Final and Estimate Calculations command under the Execute Menu.
- ◆ The Command Reference Help has been significantly expanded and revised. Some help is now available for the entire File and Input Menus.

## Changes Log

- ◆ Be sure to read the ProAdmin changes log (see What's New in Help or the ADMCHG.LOG file in the ProAdmin directory) about updates to certain calculations that change results, including #LSTBUSDAY, Joint & Survivor annuity factor components, cash balance components that project interest to NRD, project & prorate accrual components, Joint & Survivor payment forms based on age last birthday, service definition sets with multiple service definitions.
